To serve, to heal and to educate

Hematology/Oncology Fellowship Program

2016 / 2017

Cooper University Health Care

Cooper Medical School of Rowan University
Welcome to Cooper’s Hematology/Oncology Fellowship Program

The MD Anderson Cancer Center at Cooper - Cooper University Hospital Hematology and Medical Oncology Fellowship Program is an ACGME-accredited three-year comprehensive fellowship program that offers two positions per year.

The hematology/oncology fellowship program provides a large and diverse patient population allowing fellows to gain experience in oncological, benign and malignant hematological diseases in both the inpatient and outpatient settings. Daily interaction with other departments such as pathology, radiation oncology, surgical oncology, palliative care, pulmonary, gastroenterology, urology and interventional radiology insures a multidisciplinary approach to patient care which enhances the clinical training experience and prepares fellows for clinical and/or academic practice in the future. The program offers teaching in the management of malignant and nonmalignant hematologic disorders and solid tumors; experience in molecular biology, coagulation, blood bank, and laboratory medicine and participation in MD Anderson, NRG, Pharmaceutical and basic science protocols.

As a fellow you will spend the majority of your time between Cooper University Hospital’s main campus inpatient services and our two major outpatient centers—one in Camden and the other in the suburban area of Voorhees, NJ.

Cooper University Hospital is the largest academic medical center (594-bed) and only level 1 trauma center in southern New Jersey. It is the only hospital in Southern New Jersey to have a dedicated 30-bed inpatient oncology unit. The medical center serves the needs of a broad patient population consisting of primary, secondary and tertiary medical care. Consumers and physicians recognize the system as being South Jersey’s leading medical center. In annual surveys assessing the region’s medical care, Cooper’s physicians are frequently recognized as “Top Doctors” in their fields. These world-class physicians are the teachers with whom you will interact during your educational experience.
Cooper University Hospital's inpatient service is divided into the hematology/oncology inpatient team and the consult team. The inpatient team is composed of an attending, fellow, resident and medical student. On this service you will be exposed to a wide variety of hematological and oncological patient care issues. The consult service is divided into a teaching and non-teaching service. The teaching consult service is comprised of one attending, a fellow and resident(s). In order to insure the appropriate balance of education for fellows, the non-teaching consult service is staffed by an attending and nurse practitioner and handles the overflow of the consult service when patient census is high.

Outpatients are followed during the first, second, and third years. In the outpatient setting, fellows rotate through a host of specialty clinics including benign and malignant hematology, gastroenterology, genitourinary, breast, thoracic, sarcoma, melanoma, central nervous system, and head & neck oncology. Fellows are assigned to the specialty clinics of various faculty members for 6 months at a time and have the opportunity to be exposed to all clinics by end of training.

The curriculum also allows fellows to enhance their skills in procedures such as bone marrow aspiration and biopsy, peripheral smear interpretation, intrathecal chemotherapy administration via lumbar puncture and ommaya access. MD Anderson at Cooper-Cooper University Hospital utilizes a fully integrated Electronic Medical Records (EMR) system, which can be accessed from any computer. All inpatient, outpatient, chemotherapy orders and imaging are via the EMR system.

**Schedule**

The PGY-4 training year emphasizes management of both inpatients and outpatients. As a first year fellow you will alternate between the inpatient service and consult teams and will have one designated day of outpatient clinic per week.

The PGY-5 training year involves less patient responsibility, more elective time, and initiation of research projects. The second year fellowship curriculum includes two full days of clinic, one day of hospital coverage and the remainder is left for research or other clinical activities. As a second year, you will have one designated month of research and one required month of bone marrow transplant at a designated institution.

The PGY-6 year emphasizes research responsibilities. As a third year fellow, you will mostly focus on electives, research and administration activities and outpatient clinics, which includes two full days.

Fellows will be expected to take at-home call throughout the fellowship in one-week blocks whereby the fellow covers inpatient and outpatient issues and emergency situations.
Lectures/Conferences

The fellowship program holds two or three didactic lectures per week in various hematological and oncological subjects given by faculty and experts in the field. In addition to these lectures, fellows participate in journal clubs, morbidity and mortality conferences, board review, and a peripheral smear and bone marrow slide series.

All fellows have the opportunity to attend and submit abstracts and research to national conferences such as the American Society of Hematology (ASH), the American Society of Clinical Oncology (ASCO), the National Comprehensive Cancer Network (NCCN) and many other conferences.

Tumor Boards

Every week fellows are expected to participate in a very robust series of tumor boards to enhance the system based approach of multidisciplinary cancer care. In addition to tumor boards, every month the department has a research conference, where all active and future research protocols are discussed.

CooperHealth.edu
Research

**Cooper Research Institute**

Through basic and clinical research, faculty at Cooper University Hospital are bringing scientific discoveries to life with access to cutting-edge treatments in fields such as cancer, cardiology, critical care, diabetes and gene therapy. Cooper faculty members currently conduct about 340 National Institutes of Health (NIH) and industry-sponsored clinical trials each year. In South Jersey, many of these are only available at Cooper. The campus now holds about 46 NIH and federal grants and nearly $30,000,000 in aggregate research funding, making it number one among the regional medical campuses in the country. Past research by Cooper faculty has led to new standards of care and novel therapies in fields such as cancer, cardiology, surgery and orthopaedics.

**Coriell Institute of Medical Research**

The Coriell Institute for Medical Research is an independent, not-for-profit research organization dedicated to understanding human genetic diseases and providing the highest quality genetic resources. Its affiliation with Cooper University Hospital provides an excellent opportunity to our residents to participate in a variety of basic science research.

**Hematology/Oncology Scholarly Activity**

During your experience at MD Anderson Cancer Center at Cooper – Cooper University Hospital you will have the opportunity to participate in various research activities ranging from abstracts, retrospective or prospective Institutional Review Board (IRB) approved studies, case reports to cancer research grants in various specialties and publish these manuscripts to a journal or conference of your choosing. Each fellow is also expected to complete a quality improvement project each year.

Below is a list of recent fellow publications:

**Publications**

Research continued

Nader K, Behrens DS, Leon CA, Schwarting R, Ferber A. Latrogenic lymphoproliferative disorder. American Journal of Hematology. Accepted/awaiting publication

Patel M, Nader K, Ferber A. Lytic lesions in hands and feet; unusual presentation of multiple myeloma. BMJ 2014; Submitted/Awaiting publication

Irwin L, Crane G, Rosenbloom M, Lachant NA. Platelet cold agglutinins in a patient requiring cold cardioplegia for valve replacement surgery. Submitted/Awaiting publication

Presentations

Ferber A. Myeloma Therapy for the Transplant Ineligible. Philadelphia Myeloma Rounds, November 2014

Ferber A. Now you see me now you don’t lumphoma in an immunocompromised patient. Philadelphia Lymphoma Rounds. October 2014

Lachant N. Clinical Trials in Hematologic Malignancies. Lukemia & Lymphoma Society and Gilda’s Club. April 2014

Lachant N. Clinical Trials in Multiple Myeloma. Leukemia & Lymphoma Society and Gilda’s Club. March 2014

Somer RA. What Every Woman Should Know About Breast Cancer. Living Beyond Breast Cancer, September 2014

Sudheendra P. Improving Telephone Management of Patient Clinical Concerns. ASCO Quality Care Symposium, 2014
How to Apply

The Hematology/Oncology Fellowship Program at Cooper University Hospital participates in the Electronic Residency Application Service (ERAS), and all information is processed through this system without exception. Information regarding the ERAS application process and timeline is available on the websites listed below.

Association of American Medical Colleges
www.aamc.org/eras

ERAS Fellowship Document Office
aamc.org/students/medstudents/eras/fellowship_applicants

ERAS applications must contain the following information in order for your application to be considered:

- Common application form
- Curriculum vitae
- Medical school transcript
- Three original letters of recommendation, one of which must be from your current or most recent training director
- Personal statement describing your training goals and future career plans
- ECFMG certification (IMG only)
- USLME reports (1, 2 and 3).

The program director and additional faculty members will review applicant files. Invitation for interview will be based upon their recommendations.

Program Eligibility

Eligibility for the Hematology/Oncology Fellowship Program requires a minimum of three years of ACGME-accredited training in internal medicine. Individuals accepted for a position in the fellowship program must be U.S. citizen, classified as a resident alien, or hold a J-1 visa.

The application deadline for the 2016-17 academic year is August 31st.

The Cooper Campus and Surrounding Area

It is extraordinary to have such a high concentration of leadership at one institution but, then, Cooper is an extraordinary hospital.

Cooper University Hospital is the center of a growing health science campus that includes the main hospital, Cooper Medical School of Rowan University, MD Anderson Cancer Center at Cooper, the internationally acclaimed Coriell Institute for Research, Three Cooper Plaza medical offices and the Ronald McDonald House.

Adjacent to the Cooper Plaza/Lanning Square neighborhood, Cooper has a long history of outreach and service efforts to its local community. Some of these initiatives include health and wellness programs for the neighborhood, development of three neighborhood parks and playground, and outreach to programs into local schools.

The Hospital’s 312,000-square-foot, 10-story Roberts Pavilion houses state-of-the-art patient care facilities, including 120 private patient rooms, a 30-bed medical/surgical intensive care unit, 12 technologically advanced operating room suites with hybrid imaging capabilities, an advanced laboratory automation facility and a 14,000-square-foot Emergency Department. The Emergency Department features 25 beds, dedicated isolation suites and autonomous CT scanning technology. Two new floors in the Roberts Pavilion, each with 30 private patient rooms, opened in August 2014. The two floors are designed to serve specific patient populations with Pavilion 8 serving a growing advanced-care surgery patient population and Pavilion 9 serving the Cooper Heart Institute for hospitalized heart patients. The Pavilion features an expansive lobby and concourse, a restaurant and coffee shop, health resource center, business center, gift shop and chapel.

The Pavilion also houses the 25,000-square-foot Dr. Edward D. Viner Intensive Care Unit. A design showcase for patient and family-centered care, the unit features 30 private patient rooms equipped with the latest in advanced technology, and allowing 360-degree patient access. Five patient rooms are capable of negative pressure isolation, and five rooms have chambered isolation alcoves. In addition, an enlarged room with operating room caliber lighting is outfitted to perform bedside exploratory laparotomy in patients too unstable for transport to the operating room.

In 2013 Cooper celebrated the opening of MD Anderson Cancer Center at Cooper, the $100 million, four-story, 103,050-square-foot center located on the Cooper Health Sciences Campus in Camden, dedicated to cancer prevention, detection, treatment and research. MD Anderson Cancer Center at Cooper offers South Jersey’s only dedicated inpatient, 30-bed cancer unit adjacent to the new cancer center at Cooper University Hospital. The center includes bright, spacious chemotherapy treatment areas, patient exam rooms, conference centers and advanced diagnostic and treatment technologies. The designers incorporated an aesthetic approach to healing with abundant natural light, a rooftop Tranquility Garden, an illuminated floor-to-ceiling “Tree of Life” centerpiece and more than 100 pieces of original art created by 71 New Jersey artists.
Cooper Medical School of Rowan University Medical Education Building is located on the Cooper Health Sciences Campus on South Broadway, between Benson and Washington Streets in Camden. The new $139 million building, which opened in July 2012, was designed for CMSRU’s curriculum with spaces and technologies to support faculty and students in their educational process. In 2012, CMSRU welcomed the class of 2016 with 50 students.

The Cooper campus is located in the heart of the Camden’s business district. The academic medical center campus is easily accessible by car or public transportation—the commuter high-speed line and bus terminal are located a half-block from the campus. Cooper is a short walk or drive from the exciting Camden waterfront where the New Jersey State Aquarium, the River Sharks stadium, the USS New Jersey and Susquehanna Bank Center are located.

Cooper is conveniently close to Philadelphia. Just a mile-long drive over the Benjamin Franklin Bridge or a ferry boat ride will put you at the doorstep of Philadelphia’s cultural, culinary and historic venues.

South Jersey also offers a range of living and entertainment options. Quaint towns such as Haddonfield and Collingswood are just 10 minutes away. The lights and action of Atlantic City and those other popular beach towns such as Cape May and Ocean City are a one-hour drive from Cooper.
